Vevčani Springs

The famous Vevčani springs are some of the most famous springs to be found in the [Republic of Macedonia](#). The springs are located on the eastern slope of the Jablanica mountain range which run through the village of Vevčani at an approximately sea level altitude at over 900 meters. The largest spring is located at the opening of one of the many caves in the region. Below the largest spring are ten minor springs which all converge together. The most famous spring is "Jankov Kamen" which is situated at 1200 meters above sea level. Another spring is "Mala Livada" from which the water has a unique flavor and color. It is situated at over 1600 meters above sea level. The highest spring is "Golina" situated at over 2000 meters above sea level. The rate of water flow from the springs is estimated to exceed the rate of 1500 liters per second, most notably in Spring.
